WEATHER FORECAST FOR SEA AREAS AROUND THE ISLAND DURING NEXT 24 HOURS

Issued at 05.30 a.m. on 03 Nov 2026

DEPARTMENT OF METEOROLOGY
SRI LANKA

CONDITION OF THE RAIN

Showers or thundershowers will occur at several places in the sea areas around the island.

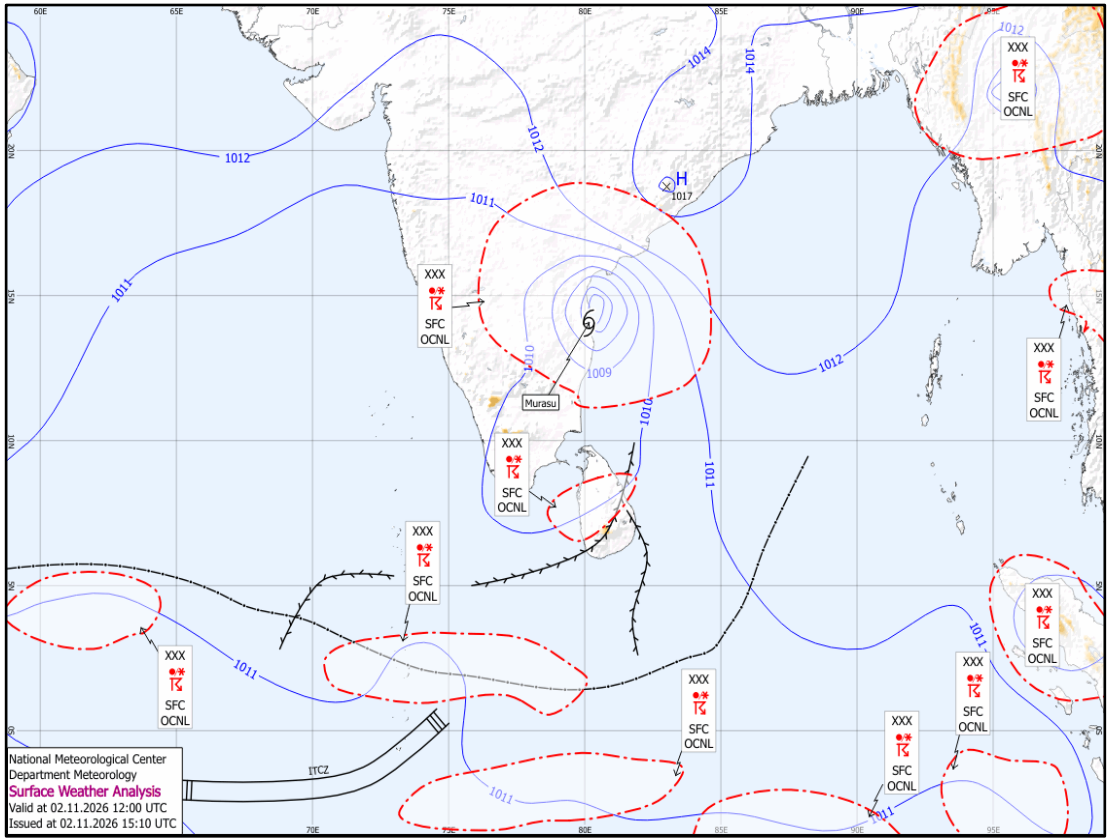

WINDS

Winds will be South-westerly or Southerly in the sea areas around the island. Wind speed will be (25-35) kmph. Wind speed can increase up to (40-45) kmph at times in the sea areas extending from Chilaw to Trincomalee via Mannar and Kankasanthurai.

STATE OF SEA

The sea areas extending from Chilaw to Trincomalee via Mannar and Kankasanthurai may be fairly rough at times. Other sea areas around the island will be moderate. Temporarily strong gusty winds (60-70 kmph) and very rough seas can be expected during thundershowers.

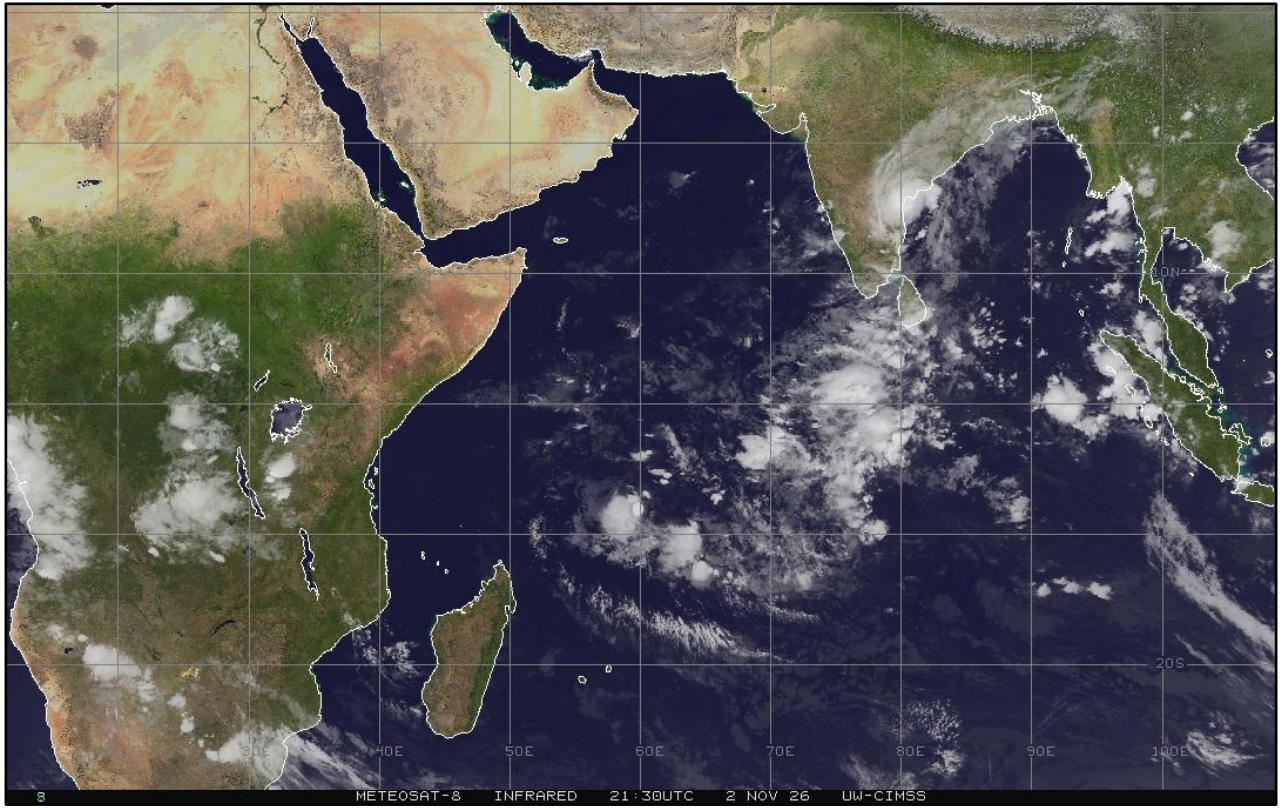

SURFACE ANALYSIS CHART

This analysis charts show the surface pressure pattern over Sri Lanka and the surrounding area. They display isobars (lines of equal pressure) and indicate areas of high (H) and low pressure (L) along with their central pressure value. Isobars are represented by solid blue lines, spaced every 1 hPa. High pressure is usually associated with mainly dry, settled weather with light winds, while low pressure is normally associated with unsettled weather, which is often wet and windy. The lower the pressure, generally the stronger the winds and the heavier the rain.

The map shows Coordinated Universal Time (UTC) and the local time is UTC+5.30
