SURFACE ANALYSIS CHART

This analysis charts show the surface pressure pattern over Sri Lanka and the surrounding area. They display isobars (lines of equal pressure) and indicate areas of high (H) and low pressure (L) along with their central pressure value. Isobars are represented by solid blue lines, spaced every 1 hPa. High pressure is usually associated with mainly dry, settled weather with light winds, while low pressure is normally associated with unsettled weather, which is often wet and windy. The lower the pressure, generally the stronger the winds and the heavier the rain.

The map shows Coordinated Universal Time (UTC) and the local time is UTC+5.30.
